

NOTBITCOIN

WHITEPAPER V2.1

PROJECT MESSAGE

Currently, Bitcoin is no longer truly decentralized. It is largely held by investment funds, large economic organizations, and wealthy individuals.

They use Bitcoin as a trump card to manipulate the entire cryptocurrency market and always find ways to take money from inexperienced and small investors; even those with many years of experience cannot escape this manipulation.

Why should the entire crypto market be dependent on and controlled by Bitcoin?

We, users, supporters, investors, crypto and blockchain developers, are tired of this and wish for a new cryptocurrency platform to replace Bitcoin. NotBitcoin is distributed for free to everyone, offering a new opportunity, a fresh breeze we want to bring to everyone, especially small investors who do not have much money.

WHY NOTBITCOIN ?

When people think of blockchain and cryptocurrency, beginners often only know about Bitcoin, while Bitcoin is just one part of the vast applications of blockchain and cryptocurrency.

We do not deny the role of Bitcoin as a leader and pioneer in the cryptocurrency revolution. However, for the reasons mentioned above, we want to bring a new breeze, a new opportunity.

NotBitcoin is developed and operated by the community, so it is not pressured by sales from investment funds or early investors.

Bitcoin is slow and expensive, controlled by financial and economic organizations, shaking the market with pump-and-dump schemes by sharks and investment funds. It is time for us, small investors, to join hands in reducing the influence of Bitcoin and use NotBitcoin as a new payment method.

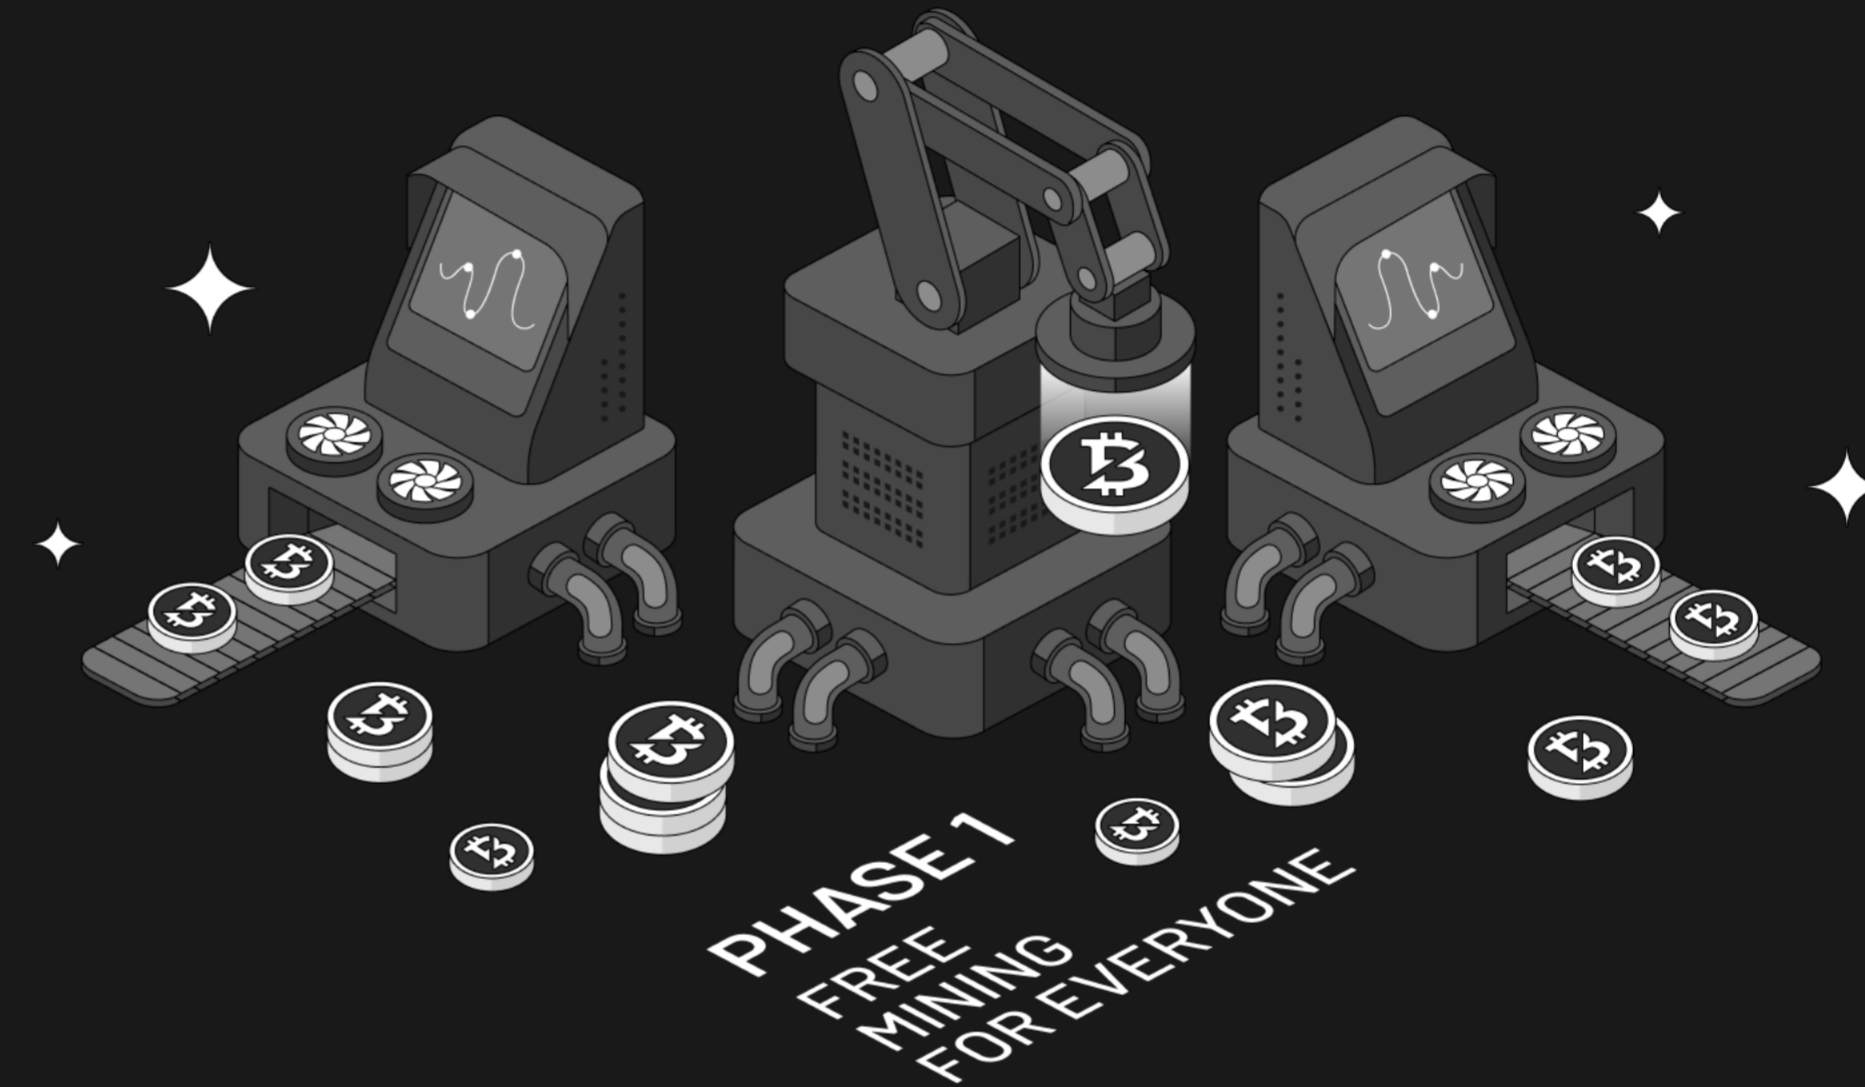

DEVELOPMENT PLAN

PHASE 1

NotBitcoin is distributed for free to users via the @notbitco_in_bot on Telegram. Why did we choose Telegram? Because Telegram is a highly secure and private application with 1 billion users worldwide, many crypto investors use Telegram as an information exchange and news update channel, and Telegram is also very open to crypto projects. Distributing NotBitcoin on the Telegram app is a simple and accessible way for everyone.

In this phase, we focus on spreading the project's message to as many users as possible. Decentralization is overlooked; instead, the application is operated centrally by servers provided by us.

Through this application, users will become familiar with the way to receive rewards for participating in a blockchain network in a very simple manner.

Our goal is for everyone in the world to own NotBitcoin completely free and simple.

DEVELOPMENT PLAN

PHASE 2

Collaborate, build, and develop projects within the NotBitcoin ecosystem. Combine with other projects to use NotBitcoin as a payment method instead of Bitcoin.

Users can use NotBitcoin as a simple and convenient payment method in applications linked and partnered with NotBitcoin.

The goal of this phase is to introduce blockchain, crypto, and web3 to ordinary users who have not had the opportunity to access web3 and crypto applications. As you know, web3 applications require you to have a certain amount of crypto in your e-wallet, which prevents them from accessing new things.

NotBitcoin is distributed for free to users, so the opportunity to access these applications is for everyone.

DEVELOPMENT PLAN

PHASE 3

Develop NotBitcoin into a decentralized, open-source blockchain network so anyone can contribute, build, and develop the project, making it a truly decentralized and powerful blockchain network.

People from all over the world can participate in mining and operating the NotBitcoin network with any device, without requiring huge resources or the stringent requirements of other blockchain networks.

\$NBIT TOKEN AND SUPPLY

There is a total of **210** billion NotBitcoin. The NotBitcoin supply is allocated according to a halving mechanism, with rewards halving every four years. This ensures the maintenance of the NotBitcoin supply at a limited level and prevents future inflation.

Users will mine **60%** of the NotBitcoin supply, **30%** will be allocated to a fund to support development projects within the NotBitcoin ecosystem, and **10%** will be distributed to the NotBitcoin development team.

These allocations will gradually unlock corresponding to the number of coins mined by users. For example, for every 60 NotBitcoin mined by miners, 30 NotBitcoin will be transferred to the ecosystem development fund, and 10 NotBitcoin will be transferred to the NotBitcoin development and building team.

The first **10** billion NotBitcoin created, called the genesis reward, will not have a daily mining limit until the total coins mined by miners reaches **6** billion. The remaining **200** billion NotBitcoin will be allocated with a daily limit according halving mechanism every four years:

First 4 years	Produce ~0.06849B NBIT / Day
Next 4 years	Produce ~0.03424B NBIT / Day
The following 4 years	Produce ~0.01712B NBIT / Day

In phases 1 and 2, NotBitcoin will be issued as tokens on the **Ton blockchain**. In phase 3, when the NotBitcoin chain mainnet is launched, NotBitcoin will be the governance coin on its own NotBitcoin network.
